C12N15/55, C12N1/21, C12N9/14
Oligonucleotide designed to act as PCR primer (reverse) to
amplify the DNA
coding sequence between FR901379 acyrase small subunit and
large subunit.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Unclassified.

Julier,C., Delepine,M. and Nicolino,M.

Mutated eukariotic translation initiation factor 2 alpha kinase 3,
eif2ak3, in patients with neonatal insulin-dependent diabetes and
multiple epip hyseal dysplasia (wolcott-rallison syndrome)
Patent: WO 0190371-A 83 29-NOW-2001;
INSTITUT NATIONAL DE LA SANTE ET DE LA RECHERCHE MEDICALE (INSERM)
(FR); Centre National de Genotypage (FR)
